

Future Engine is Manufactured in Series

(Handelsblatt, 29th /30th /31st August 2008)

Content:

As a first automobile constructor, the Japanese manufacturer Honda has started the production of fuel cell automobiles in a small series. Nevertheless, the Honda-project is like a big field trial because the manufacturing costs for a mass production are too high. Honda is acting on the presumption that they can bring on the market a competitive fuel cell automobile for approx. 60.000 € only in 2020.
