To Cast Light and Precise

(Unternehmen Region, 2nd edition /2008) Content:

The growth cores "AL-CAST" in Harzgerode and "Precision Cast" in Leipzig are facilitating the $\mathrm{CO_2}$ —savings for the automobile industry. 2 new aluminium alloys have been developed which are much more stable and lighter as before — even at temperatures over 200 degrees Celsius. The alloys shall be used as local fortifications in cylinder-crankcases of motor vehicle engines — here, they will reduce the weight and the friction.
